

Aastra 5300ip/5300 handsets

Handsets intended for companies wanting the competitive edge

Aastra 5300ip/5300 handsets are characterised by their user-friendliness, increased ergonomics and modern design.

These Aastra IP and digital handsets are suitable for both small and large companies and are compatible with the following IP communications servers Aastra 400, Aastra X Series and Aastra 5000.

Aastra 5380ip and Aastra 5380

Features of Aastra 5300ip/5300

Design and user-friendliness

✦ Touch-sensitive interactive keys and clear symbols for ease of use. In the blink of an eye the user is informed if calls are unanswered, messages left, etc. The status of their handset is also visible (call forwarded, alarms set, handsets locked, etc.).

✦ Both Aastra 5370ip/5370 and Aastra 5380ip/5380 have large screens* making the use of interactive keys child's play.

✦ With the central navigation key, the user can quickly browse through the programming menus of their handset and the call log.

Flexibility and scalability

✦ Aastra 5370ip/5370 and Aastra 5380ip/5380 handsets may have expansion modules⁽¹⁾.

Efficiency

✦ Key telephony functions such as handsfree or volume adjustment are directly managed through the integrated fixed function keys. Programmable keys allow all the capacities of Aastra call servers to be used: group work with telephony presence, filtering, dialling a number by just pressing a key, activating differentiated forwarding. These keys include LEDs so users can instantly know the status of their handset.

✦ On Aastra 5380ip and Aastra 5380, the search for contacts is facilitated by the alphabetical keypad and the search in the call server/iPBX directory.

✦ With one click, the absence key allows the user to forward calls to their voicemail or mobile phone, improving the answering service management and leaving no call unanswered. The LEDs guarantee excellent visibility while indicating voicemails or incoming calls.
